

## Front mounting Servos for the Mini and Hot Rod Classes

We have decided to add three more servo's for our club rules Firstly is the Savox, Part No SH0257MG (Also SH0257MGP) micro servo, this servo has a 21t spline so will need a different servo saver to what I'd imagine most are currently running, the Kimbrough servo saver Part NoKP112 available from Zen racing and others is perfect for this servo, mounting hardware is available from BattCave and Mardave Secondly is the surpass hobby servo Part No SJ0015M, this will soon be available from Battcave with all mounting hardware, this servo has a 25t spline which is compatible with the supplied Battcave servo saver The Savox servo retails for around £20 available at most model shops, the Surpass servo with mounting kit is £21.99 direct from Battcave. In addition, there are also servos and mounts available direct from Mardave, such as the Powerstar PL2806-LBL, again this is a 21t spline, therefore the Kimbrough servo saver Part NoKP112 will be needed

All these servos mount at the front freeing up space for your esc and receiver (Please note you may need additional mounting accessories) These servos are legal for the Mardave GP and mini masters The rules are now updated on our website If you need any more info just shout up!

Please note the Savox SH-0257MG is being replaced by the SH-0257MG+P The P stands for "PLUS" this features Soft Start and Sanwa SSR compatibility
